

Junior Mix

Our Junior Mix provides a range of nutrients especially beneficial for growing dogs.

See reverse for full ingredient details

What's in our mix?

Wild Game

This is a mix of venison and/or wallaby, possum & hare. Heavy weight-bearing bones are removed from the venison & wallaby, all other bones are left in. Heart, liver, lungs & kidneys are included. By varying the wild game component, Junior Mix provides a degree of variation to your dog's diet over time.

Green Tripe

A nutritional powerhouse for dogs, with an excellent nutritional profile that supports gut health.

Chicken

This allows us to increase the bone content with good edible bird bones, easily digested for calcium, plus a good amount of muscle meat and connective tissue.

Organs

A mix of additional organs - heart, liver, lung and kidneys are added. This makes Junior Mix very high in organs and ensures high levels of essential micronutrients.

Wild Venison Bone Broth

Made from the leg and pelvis bones from wild deer. Bone broth is fantastic for your growing pup, bones are the storehouse of minerals in the body, plus collagen & other nutrients from connective tissue are a great addition to support growing joints.

Whole eggs with shell

Eggs are a super food, a great source of vitamin A, riboflavin, folate, vitamin B12, iron, selenium and omega fatty acids.

Green Lipped Mussel Powder

Fantastic nutritional properties for young dogs, natural anti-inflammatory properties. Great for joint health and a natural source of Omega-3.
